

COMAU

Motor behind imagination

WE INSPIRE THE FUTURE OF THE INDUSTRY

Partnering with our customers

We are world leaders in the field of industrial automation.

Our offerings include technologies and systems for the production of electric vehicles, hybrid and traditional vehicles, a full range of industrial robots, collaborative and wearable robotic solutions, autonomous vehicles for logistics, dedicated machining centers, and assistance and maintenance services.

Due to our efforts in the field of innovation and by constantly following market trends, we guarantee our customers the latest expertise in electrification and digital transformation.

With over 45 years of experience, a strong presence in the main industrialized countries, and thanks to a network of 50+ distributors, we help companies of all sizes and in any sector achieve their goals.

INNOVATION AND DIGITAL TRANSFORMATION

We are convinced that innovation guides the industrial sector towards excellence.

We have made open automation easier and more accessible, in addition to highly intuitive and fully interconnected.

Our HUMANufacturing approach sees humans at the center of the smart factory, where robots and industrial machines collaborate safely with operators and intelligent production systems, thanks to the aid of wearable technologies and digital solutions.

With our innovative in.Grid infrastructure we deliver a multi-competence platform able to improve manufacturing performance, process simplification, and data analytics through the application of IoT technologies.

ELECTRIFICATION

We are able to follow the **entire electrification process** thanks to a portfolio of innovative products and process technologies that support the **transformation and use of electricity**. We offer **modular, scalable and effective solutions** for complete coverage of automation production needs.

Our Strengths:

- 3 research centers (China, USA, Italy)
- More than 45 customers worldwide
- Over 200 dedicated resources

COMAU ACADEMY

Our learning factory, the Comau Academy, was founded in 2007. In its first year of operation, 400 employees were trained in project management skills to improve the company's operational performance. 12 years later, the Academy serves over 15,000 people annually. Its vast offerings in the field of training for companies, professionals and talented young people is the result of collaboration with universities and highly prestigious international training bodies.

Thanks to the use of e.DO™, the articulated, portable and open source robot developed by Comau, and the e.DO™ Experience training program, students and professionals learn STEM subjects, soft skills and the notions of industrial culture in an engaging way.
