COMAU

e.DO Robotics Licenses is a training path where Students from 15 years up can start a path, leading to become Experts in Robotics while still at school, getting their first tastes of the working world.

It is a unique opportunity for students to achieve a real Robotics certificate, acknowledged at an international level, whose value is highly recognized by manufacturing companies.

e.DO Robotics Licenses provides two levels: Use and Programming, Fieldbus and I/O Communication.

Use and Programming and Fieldbus and I/O Communication Licenses are equivalent to the certification granted to professionals and companies and can immediately be spent on the job.

Students follow training paths from 60 to 100 hours divided between online and traditional classroom, while the final exam and the certification are executed at a Comau certified training center.

e.DO Robotics Licenses packages include:

- an online training path, usable on the LMS platform of Comau Web Academy, with multimedia material, simulations and exercises;
- a final exam in a working environment;
- the final certification granted by a qualified center;
- an enabling Teacher Training course.

For educational facilities interested in creating a real working environment on their premises, a Technology Kit is also available.
